Wazuh

Wazuh is a free security tool that helps monitor and protect systems. It looks at log data from different sources, using special tools to find important details and spot possible security issues. It helps detect threats and respond to security problems.

Wazuh installation

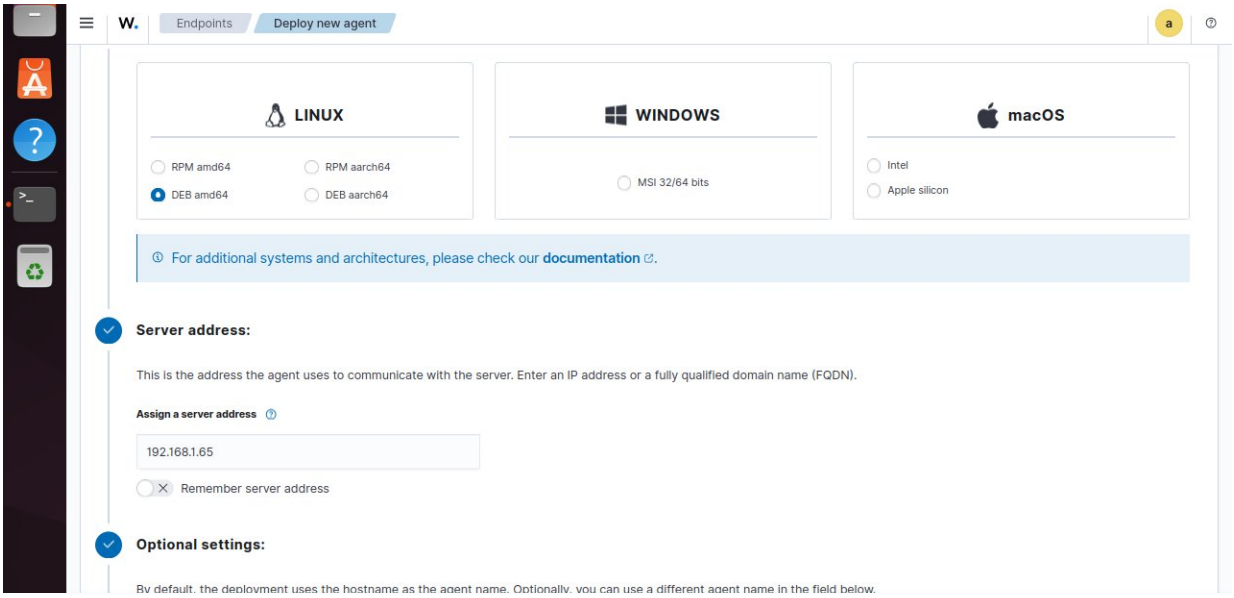
curl -sO https://packages.wazuh.com/4.7/wazuh-install.sh && sudo bash ./wazuh-install.sh -a

This command downloads the Wazuh installation script from the specified URL and then executes it with superuser privileges to install Wazuh on the system.

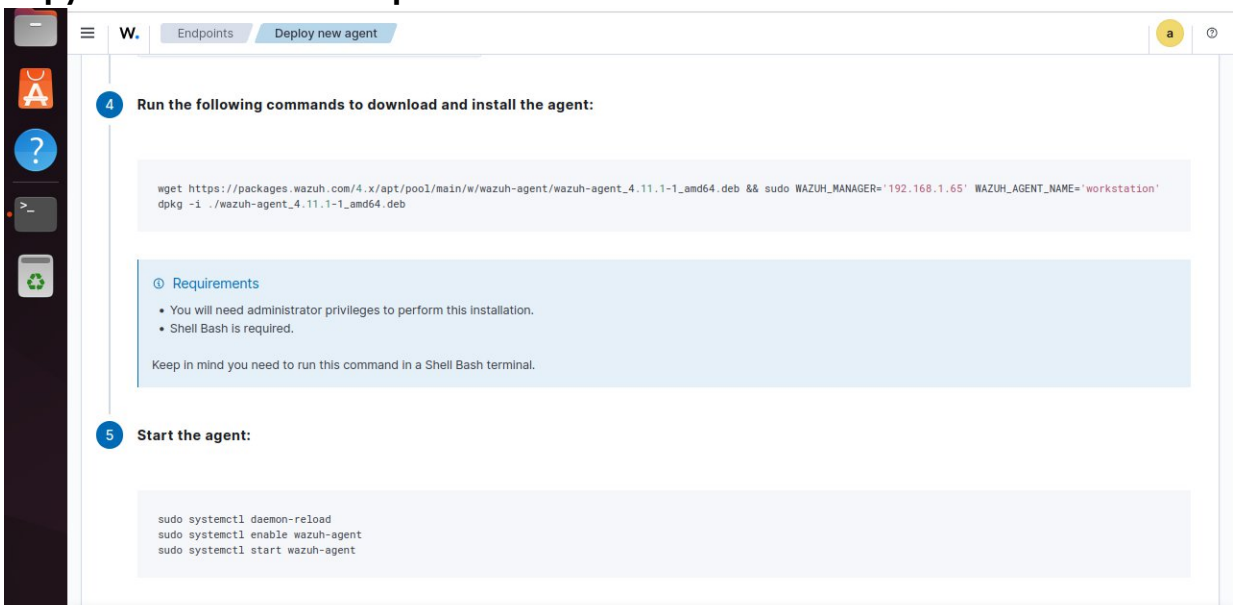
systemctl start wazuh-“*”

The command systemctl start wazuh-"*" is used to start all Wazuh services that fit the given pattern. systemctl is a command used on Linux to manage system services. Wazuh is a free security tool that helps monitor systems for threats, track security events, and ensure everything is working as it should. It helps businesses detect problems, keep their systems secure, and respond to incidents quickly..

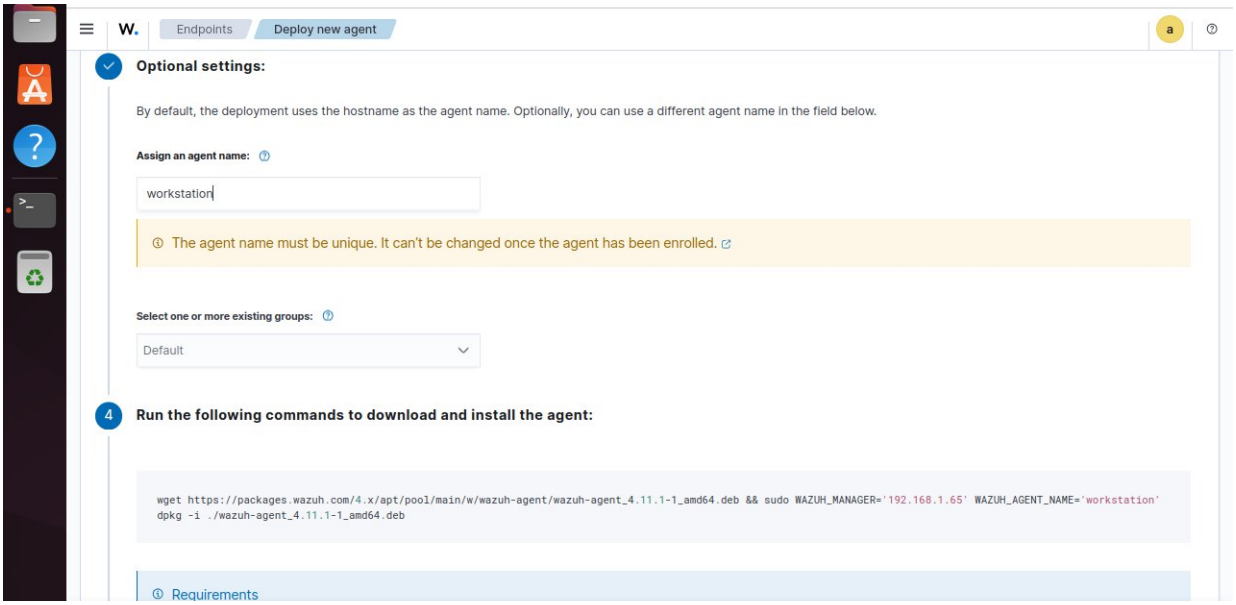
Open browser and type https://ubantuip and then deploy new agent



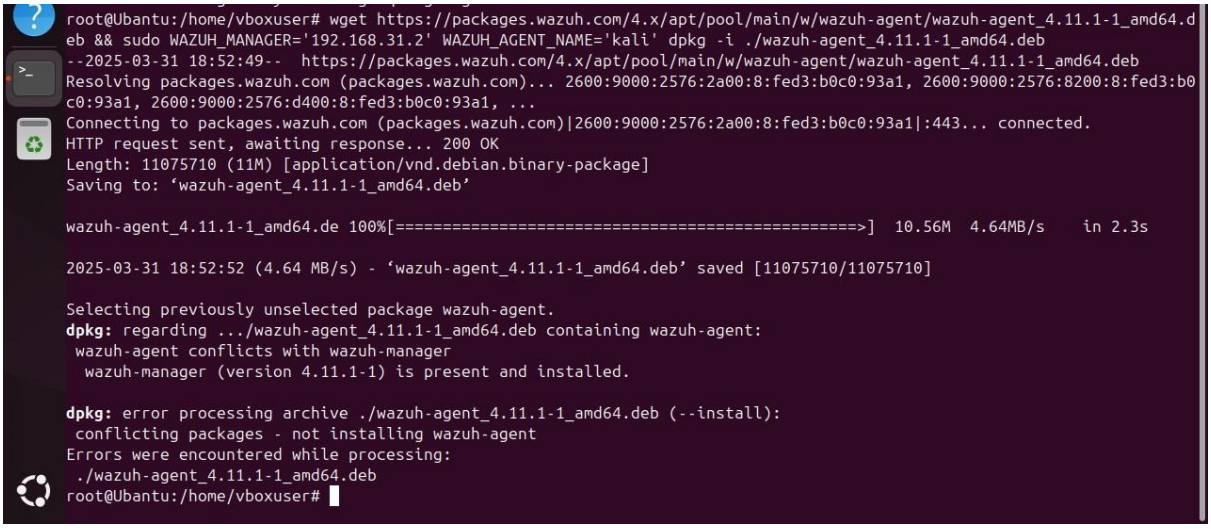
Copy the commands and paste on terminal of workstation



Set Wazuh agent name



Copied command results



```
root@Ubantu:/home/vboxuser# wget https://packages.wazuh.com/4.x/apt/pool/main/w/wazuh-agent/wazuh-agent_4.11.1-1_amd64.d
eb && sudo WAZUH_MANAGER='192.168.31.2' WAZUH_AGENT_NAME='kali' dpkg -i ./wazuh-agent_4.11.1-1_amd64.deb

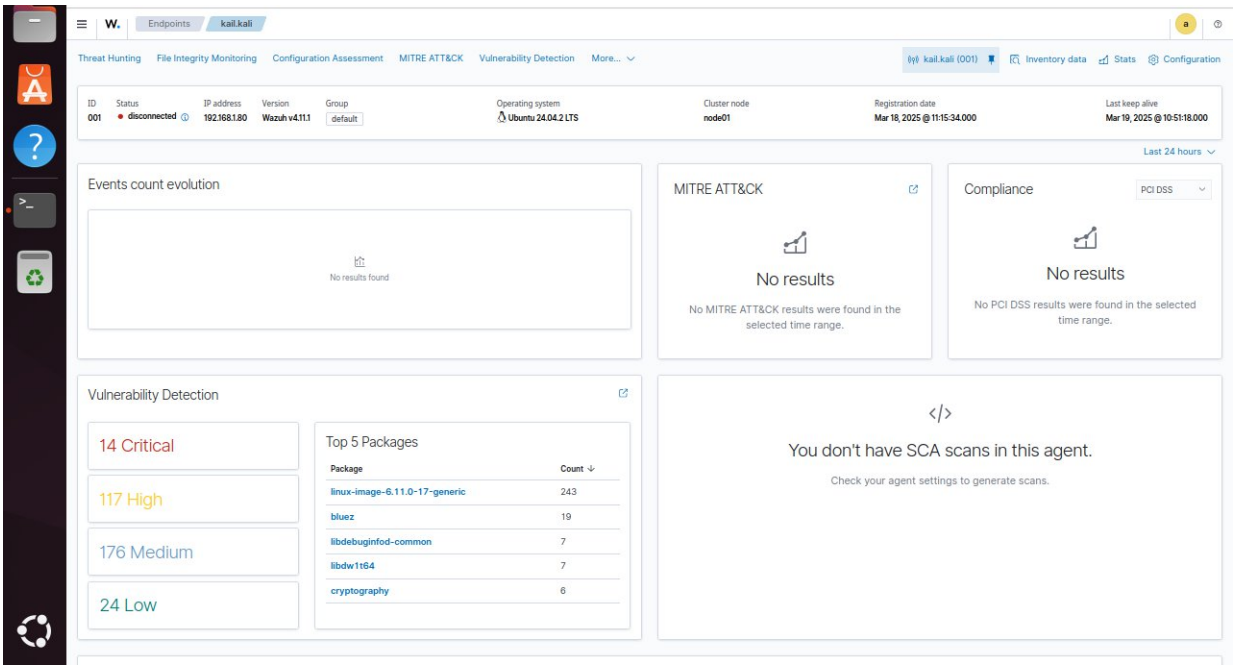
root@Ubantu:/home/vboxuser#
```

sudo systemctl start wazuh-agent

sudo systemctl enable wazuh-agent

This command is essential for ensuring that the Wazuh agent is always active and monitoring your system for security threats, contributing to the overall security posture of your environment.

This action starts the Wazuh agent, which then begins checking the system for security issues, gathering logs, and sending the data to the Wazuh manager to be analyzed. If everything works correctly, the agent will start helping monitor and manage the system's security.

Now you can analyse the workstation from server


Agent dashboard
